Capacities based on operating pressures of 80 PSIG to 125 PSIG. For capacities at pressures out of this range, consult factory. Maximum operating pressure: 250 PSIG. Maximum operating temperature: 350°F. Pressure drop less than 3 PSI at 80-125 PSIG. *Maximum flow for 3 PSI pressure drop.

Sizing instructions:

1. Determine inlet temperature to aftercooler.
2. Determine desired outlet temperature. (Aftercooler outlet temperature = ambient temp. + approach)
3. Determine needed approach. (Approach = desired outlet temp. - ambient temp.)
4. Find flow (SCFM) under column of correct inlet and approach temperatures and read left for model number.

FEATURES

- Horizontal or vertical flow directions
- Galvanized steel cabinet
- Open vented motor
- Pressure drop less than 3 PSI at 80 to 125 PSIG

BENEFITS OF AFTER-COOLERS
